SUMMARY

Computer Science student with hands-on experience building full-stack and frontend web applications in Java, JavaScript, React, and TypeScript. Interested in scalable web systems and backend development.

EDUCATION

Honours Bachelor of Science at **University of Toronto**

September 2024 - current

- Awards: International Merit Admission Award (2024)
- cGPA: 3.84/4.00

SKILLS

Languages	Java, JavaScript, Python, PHP
Web & Frontend	HTML, CSS, React, Vue.js, jQuery
Backend & Databases	MySQL
Tools & Other	Git, GitHub, UI/UX design, Godot (GDScript)

COURSE PROJECTS

"Escape Uoft": an adventure game with Java Swing GUI ([Link to site](#))

November - December 2025

Java

- Developed a functional text-based adventure game in a group of 6 using Java, featuring two mini-games and storytelling, employing Clean Architecture and SOLID principles to ensure modularity and scalability
- Directed and assisted two teammates as they worked on their use cases, ensuring quality output while allowing them to learn and understand the development process.
- Worked on implementing core functions (such as the ability to reset the game), ensuring it follows the correct dependency flow of clean Architecture.
- Created unit tests for the use cases I developed, ensuring 100% code coverage.
- Utilized Git to ensure smooth collaboration and communication with team members, and made use of pull requests to review changes made.

PROJECTS

Aléatoire: Varied Web Apps ([Link to Hub](#))

July - September 2025

JavaScript, jQuery, Vue.js, AJAX

- Developed a collection of interactive web applications to explore frontend architectures and client-side logic, including calculators and data-driven tools.
- Built a number-theory web app to compute perfect numbers and their factors while framing it as a game.
- Implemented an interactive Caesar Cipher mini-game to apply basic cryptographic concepts through JavaScript logic.
- Deployed the applications via GitHub Pages.

Art portfolio site ([Link to site](#))

October 2025

React, TypeScript, HTML/CSS, Vercel

- Built a single-page web application using React and TypeScript, organizing content through reusable components and typed props to be deployed using Vercel
- Implemented responsive layout logic including a masonry-style grid, tab-based navigation, and lightbox interactions.
- Account for varying screen sizes when designing the grid layout and navigation tabs.

LANGUAGES

English (fluent), **Indonesian** (native)
